

at altitudes from the surface to approximately 17,000 feet. These distances and altitudes may vary depending on local conditions and infrastructural constraints such as adequate radar and radio frequency coverage. The primary function of the TRACON is to provide a variety of air traffic control services to arrival, departure, and transient aircraft within its assigned airspace. These services include aircraft separation, in flight traffic advisories and navigational assistance. The four existing TRACON facilities provide terminal radar air traffic control services to the four major airports and a number of small reliever airports located within the Baltimore-Washington area.

A range of alternatives are considered in the DEIS including replacement or refurbishment of three of the four existing TRACONs, partial consolidation, No Action and full consolidation. Analysis of alternatives determined that only full consolidation meets the Purpose and Need of the proposed action. The full consolidation alternative would not cause significant environmental impact in any of the 23 impact categories assessed.
